Gun Motion Detector™

2GIG-GNGRD1-345

Built into a 3-digit combination trigger lock, the 2GIG Gun Motion Detector adds an important safety tool for firearm owners by providing a timely notification to the control panel when a gun is moved.

Combination Lock .... Transmitter

Key Selling points:

- The only professionally monitored trigger guard available.
- Hardened steel lock deters unauthorized use of a firearm.

Key Features:

- Fits many handguns, rifles and shotguns having a trigger guard.
- 3 digit combination trigger guard deters unintended use.
- California Gun Safety (DOJ) Device Certified.
- Not to be used on a loaded firearm.

GUN MOTION DETECTOR SPECIFICATIONS & TECHNOLOGY

GUN MOTION DETECTOR SPECIFICATIONS

Ordering Part Number	2GIG-GNGRD1-345
Wireless Signal Range	350 ft (107m), open air with Wireless Control Panel
Transmitter Frequency	345 MHz
Compatibility	2GIG
Supervisory Interval	70 minutes
Sensor Dimensions (L x W x H)	2.7 x 2.3 x 1.4" (69.5 x 57.3 x 36.4 mm)
Operating Temperature	-4° to 140°F (-20° to 60°C)
Operating Rel. Humidity	0 to 90%, non-condensing
Battery (included)	CR2032, 3V
Projected Battery Life	5 years
Warranty	2 years
Regulatory	FCC: Part 15, ASTM: F2346-04, Cal Gun Safety Device

Notification Sensors by 2GIG

The Gun Motion Detector is part of the new 2GIG Notification Sensors line, enabling more smart security and control than ever before. These easy-to-install solutions add multiple unique touch points to the 2GIG system. With this growing line, dealers can sell and install increasingly personalized systems that improve customer satisfaction and retention.

Early Awareness Brings Peace of Mind

The new notification sensors enable homeowners to be notified earlier in the "event cycle" such as when a side yard gate is opened or when the stove is left on (before something catches fire).

Customized Notifications

Select 2GIG sensors can also provide early warnings with an unparalleled level of customized notifications for end-users through our back-end partners, like alarm.com. End-users can choose to get notifications on their smart phones via backend partners' app, or alarms on their compatible security panel.
