

Cell Upgrade Kit

Increase your video intercom's capabilities by adding cellular connectivity.

Features

Utilizes one of the largest LTE networks in the country

GateHawk's Cell Upgrade Kit works through Verizon to provide more intercom sustainability in various situations (weather, internet outages, etc.).

Provides the same user experience without any wired ethernet

The time, effort, and expenses initially required for wired ethernet connectivity can now be redirected internally for the community's benefit.

Reduces system downtime during community internet outages

If wired internet goes down and cell service has been activated, the video intercom will fallback on cellular connectivity and still perform all the required functions in the meantime.

Benefits

Easy Activation

Easily request service activation over GateHawk's cloud-based web platform.

Reduce upgrade costs

Costs for the Cell Upgrade Kit are low because it simply adds in an extra cellular connection and installation requirements are minimal.

Optional enhancement

The Cell Upgrade Kit only complements top-of-the-line video intercoms. The community is protected that much more after installation.
