

All access. One source.

LiftMaster's Proprietary RFID system is the perfect complement to our comprehensive line of smart access control solutions.

To help you to easily provide communities and businesses with a hands-free entry control solution, we've integrated RFID capabilities into our offering. These have been thoroughly tested to ensure seamless operation with LiftMaster's line of smart access solutions. Plus, this LiftMaster® system allows all vehicle access data to be logged and accessible via alerts and customizable reports through myQ® Community web portal for added security and control.

All LiftMaster RFID tags work exclusively with our RFID Reader, which is capable of reading vehicle tags from 20 to 30 feet away. RFID long-range access options not only enhance user convenience but also improve vehicle flow to and from a property.

RFID Long-Range Reader (LMSC1000) is compatible with our line of access control systems and gate operators. The reader and tags work seamlessly with CAPXLV2, CAPXM, and CAP2D Access Control Systems for hands-free control of a LiftMaster Gate Operator.

Dual-Purpose Vehicle RFID Tag (LMUNTG*) is non-transferable and can be universally applied to the either the headlamp or windshield.

Rearview Mirror RFID Hangtag (LMHNTG*) is a convenient solution for guest passes, loaner vehicles, student/faculty parking and employee access control.

And everything is backed by LiftMaster's superior Customer and Field Support.

*If specific Facility Code and Start ID required, use special part #s SPLMHNTG, SPLMUNTG
